

EDUCATE

Join our teams to deliver the generational impact that the campus and MLCTB offer.

Individual visits, youth field trips, and group tours of the Memorial plazas and the Museum provide educational experiences that engage the public and our youths' sense of history, sacrifice, and values.

The Rear Admiral Leroy Collins, Jr. Veterans Museum presents collections of service members' memorabilia and story boards that depict their experiences.

We are pleased to note that 89% of Hillsborough County residents concur with the Federal STEM Strategy – that children should have more hands-on STEM education.

The MLCTB provides experiences that emphasize the importance of education to our futures. Adults will appreciate how the Military has increasingly relied on high-tech solutions and highly educated soldiers. Our Youth will see and touch the technology that can ignite their interests in STEM based education and careers. Programs such as the Department of Defense's STARBASE offer children an opportunity to gain hands-on STEM education and learn how the military uses science and engineering to secure America. The recent creation of the U.S. Space Force adds another exciting dimension to our High-Tech futures.

Additional experiences provide veterans with space to display their works of art, a modern graphic presentation module/theater, a well-stocked reading room with audio books/DVD library as well as a patriotic gift shop stocked with military artistic creations, memorabilia, and other popular collection items.

“Educate leads to Innovate”
